Cockroach Preparation

*** Preparation is key to a successful extermination of cockroaches. The type of preparation will reflect upon the success of the treatment (good preparation = successful treatment). If there is little or no preparation followed; Gray Wolf Pest Control has the right to refuse treatment.**

Please try to complete all steps below as best as possible.

1. Cleaning: Make sure all cleaning is done before the treatment. Garbage, crumbs and grease should be cleaned throughout unit/house or at least in areas where cockroach activity is present. Common areas that need to be cleaned are: kitchen floors, around and behind stove, kitchen cupboards, around and behind fridge, kitchen drawers and dishes. It is advised to clean with a mild soap and water using a rag, sponge, brush or vacuum. Avoid cleaning with heavy cleaning products as this can cause cockroaches to scatter.

2. De clutter kitchen: Clear cupboards, counters and drawers of items such as food, dishes and silverware. It is advised to place these items on a table in another room or area where cockroach activity is low.

3. De clutter unit/house: Make sure there is space for Gray Wolf Pest Control to work. Allow access to baseboards (perimeter of rooms) by moving furniture and other items twelve inches away from walls. It is not necessary to move furniture or other items away from walls in rooms where cockroaches are not found however, following this step completely will help treatment.

Post treatment steps

1. Wash dishes more regularly
2. Dispose of garbage more regularly
3. Do not leave food out, make sure food is sealed
4. Monitor activity, if activity increases after 10 days, call to schedule a follow-up
